Profile Summary

Electronics and Communication Engineering undergraduate (2028) with hands-on experience in software development, AI-powered applications, embedded systems, and IoT solutions. Experienced in developing end-to-end projects using Java, Kotlin, Python, JavaScript, Firebase, and REST APIs. Passionate about problem-solving, software engineering, and building scalable technology solutions.

Education

BACHELOR OF ENGINEERING:Electronics And Communication 2024 – 2028
R.M.K College of Engineering and Technology
7.6 (Till Date)

HIGHER SECONDARY:DAV Matriculation Higher Secondary School 2023 – 2024
Secured - 84.5%

SECONDARY SCHOOL: Jaigopal Garodia Mat Higher Secondary School 2021 – 2022
Secured - 94.4%

Skills

Programming Languages
Java, Arduino C++

Web Development
HTML, CSS, Node.js

Mobile Development
Kotlin (Android Studio), Flutter

Embedded Systems & IoT
Arduino, ESP32, Embedded Systems, IoT, Sensor Integration

Artificial Intelligence
AI Chatbots, Prompt Engineering

Database Management
MySQL, Firebase, Clerk

Tools & Platforms
Git, GitHub, VS Code, Arduino IDE, Android Studio, Vercel

Certifications

NPTEL Certification (Elite) in Sensors And Actuators

Google Flutter App Development training at FITA Academy

Core Java training at FITA Academy

Intern at **Webnique Digital Solutions**, Banglore

Projects

AASRA:
Developed Aasra, an Android-based disaster relief and rescue coordination application designed to connect citizens with authorities during emergencies like floods and cyclones. Enabling citizens to locate nearby shelters, request rescue assistance, and receive safety updates with minimal manual effort — including an SMS-based fallback for zero-connectivity scenarios.

Sentinel pay – AI-Powered UPI Fraud Detection System:
Developed an AI-powered fraud detection system designed to identify and prevent suspicious UPI transactions in real time. Implemented intelligent transaction analysis to detect potentially fraudulent patterns and flag suspicious activities, enhancing digital payment security. Focused on improving fraud awareness, transaction monitoring, and secure digital payment experiences..

Smart Sentinel Robot:
Designed and built an autonomous security robot integrating 4 sensor types (ultrasonic, PIR, gas, temperature) with Arduino-based motor control for real-time obstacle detection, human-presence monitoring, and environmental sensing.Implemented voice-interaction capability for hands-free operation and intelligent navigation, improving on-site safety monitoring.

ACHIEVEMENTS AND PATENTS

Patent Filed-Multilingual Voice-Controlled Smart Wheelchair & Smart Sentinel Robot

1st Place-Project Exhibition, RMK College of Engineering and Technology, Garage Innovators, TWYSTRA'26, RMKCET**.**

2nd Place-Mini Project Contest, RMK College of Engineering and Technology, ElectraXpo, ELECTROWIZ'26, Velammal Engineering College

3rd Place-Innolab, FAISCA 2K25–2.0, Science & Innovation, RMK College of Engineering and Technology

Project Presenter-TECHNOVATION, College of Engineering Guindy, Anna University
